Subject: Testimonial: Vortex Fuel Optimizer/ Junkyard Dogs

Greetings,

Let me jump right to the point. Junkyard Dogs of Raleigh, LLC began using the Vortex system at the end of summer 2008. Cory Viklund is managing partner of the Raleigh branch of "JYD" and he contacted me about a new product he was testing. He said he was trying out a product (Vortex) that guaranteed a 10% increase (at least) in fuel mileage as well as other benefits related to more purely spent fuel (greatly reduced emissions). I asked him to keep me updated as he tried out the technology. A short time later his results began coming in and his mpg on an automatic Isuzu NPR with full sided dump attachment showed a dramatic improvement. His mpg had jumped from just above 8 mpg to a fluctuating range of 11.5 to a little over 12 mpg. Cory and I subsequently had several conversations in which I asked him somewhat sceptically, "Are you certain what you are seeing?" He assured me and urged me to have the technology installed on the Greensboro JYD trucks. The short of it is that our trucks here in Greensboro (manual Isuzu NPR's) have experienced the same level of increased performance....the readings pre- Vortex had us at 12.8 mpg to 13.3 and we experienced a pre-oil and filter change increase to a range of 15.5 to a fraction over 16 mpg. Solid figures post filter and oil changes are forthcoming; we had these done last Wednesday and Thursday.

Needless to say we have been blown away by the results. I should also add that we have the Fuel Optimizers on our personal vehicles and the results are equally impressive. The added benefit (maybe the greatest?) of tremendously reduced fuel emissions is one we are actively informing our customers of...a 90% reduction of carbon imprint means a lot.

Please feel free to contact me.

Sincerely,

Thad Loftin
